Fall 2026 ECE69500 - OPT4XL - Merge AP

Final Project

Instructions

You must notify the Instructor by **October 31, 2026, 11:59 pm ET of the topic** you have chosen for your final term project.

Deadline to submit the report will be December 12, 2026, 11:59 pm ET.

A 3-page report (excluding references) in the format of a journal or a conference paper that provides a report and summary of a chosen online tutorial given at recent (2023 and after) AI/ML conferences such as CVPR, AAAI, NeurIPS, and ICML.

Examples include:

- https://icml.cc/virtual/2024/events/tutorial
- https://neurips.cc/virtual/2024/events/tutorial

Projects should be unbiased and well written. You may do the projects individually.

We will use iThenticate to detect plagiarism and the use of LLMs such as ChatGPT both of which may be instances of academic dishonesty.

Due December 12 at 11:59 PM

Use the above link to submit your Final Project assignment in Gradescope.

Final Project is worth 100 total points:

Here is the breakdown:

- In the Introduction section, the article should provide background on the general area and motivate the survey. (15 points)
- The references should be relevant to the topic of the survey. IEEE Journal papers and Prestigious ML conference papers are strongly preferred. Including references which present different approaches to the solution of the same problem is desirable. (10 points)
- The main part of the article -- survey of the area -- should provide details about the area/problem being surveyed; give a thorough description of the contributions in the cited papers; compare and contrast different contributions, including numerical/simulation illustrations; and give some insight and provide suggestions for future work. (65 points)
- Since this is a report, please take care of clarity and style thereof. (10 points)
